1. What was the most interesting or useful thing for you that came out of today's discussion?

- Conversation took a few turns I hadn’t thought of—very interesting.
- Hearing different viewpoints from faculty and staff. Address the issue in three clear parts.
- The consideration of what “norms” are currently existing in the world of technology and what, where, and how these norms might evolve in the future. Well-rounded discussion from all points of the room.
- There were several interesting discussions.
- A number of issues were brought up that have no real answers/solutions. This all made me more conscious of these issues and made me start to evaluate or re-evaluate my policies, thoughts, and feelings.
- I always have a part of my opening lecture regarding becoming a community of learners with my classes. However, students realize I should make this more participation. I will also include discussion about electronics, etc. when preparing students as professionals.

2. Do you have any additional comments on the session?

- I’d like to revisit this periodically.
- We could have used much more time.
- Overall, this entire series was very good. There were interesting topics.
- This needs a few more sessions!!

3. Do you have any suggestions for assessing students’ technology fluency or for responding to students’ needs for developing this fluency?

- Students must be aware of how materials placed on the web are open to everyone.
- I think students would be interested in a class developed around these issues. It could possibly be in CIT or COM.
- Students should be tested in some reliable way when they take Compass-hard to do.
4. Do you have any suggestions for other topics you would like the Educational Technology Center and the CTL to consider for Dialogues on Digital Literacy?

   o This area is important! Do some more.
